

## **Industrial Production Series - Laboratory equipment**

Industrial ovens applies to the need for in-power temperature testing and aging inspection of semiconductor, LCD, electronic products, precision instruments, etc.

**The following are subdirectories for this series of products:**

-----  
**Set temperature aging (assembly lines)**

Execution and meet the standard:

Uses: lab ovens Electronic products pipeline aging process

Features:

- Belt feed, improve production efficiency.
- All operating status displayed in front and back sides simultaneously.
- Automatic stop function to prevent wrong operation.
- In terms of security, equipped with automatic overheat prevention, over-preventive device, over current electric leakage protection, and other security measures.
